Telinta Adds Three New Auto-Provisioning Profiles

Telinta recently added three new Auto-Provisioning Profiles for popular IP phones.

The Yealink SIP T-54W, Snom D735 and D785 can easily be provisioned from your TeliCore™ Administrative Portal, without requiring manual configuration.

Telinta offers hundreds of profiles for popular phones. You can see a list in the CPE Profiles section your Administrative Portal.

Since 2002, Telinta has developed Auto-Provisioning Profiles for IP devices from Cisco, Polycom, Yealink, Snom, Grandstream, Fanvil, Gigaset, Uniden, Panasonic, VTech, and other manufacturers.

News Flash

Two new DID API Integrations: Bulk Solutions and Ziron

Telinta has added an API to our TeliCore softswitch and billing platform for DIDs from Bulk Solutions and Ziron. These integrations help you to more easily use DIDs. If you offer your users the ability to select their own phone numbers, the inventory from your DID providers can be presented to the user, without you needing to purchase DIDs before your customers do.

Please contact support@telinta.com to enable these APIs for your partition.

More Solutions

STIR/SHAKEN Options

As the FCC implements its new guidelines regarding robocalls, many VoIP service providers will need to make important decisions about how to meet their requirements.

Telinta has provided an additional option to our customers. We've integrated TransNexus, a leader in robocall mitigation services, into our TeliCore softswitch platform. This integration gives Telinta customers access to the TransNexus ClearIP software solution. This may help Telinta customers make important decisions about STIR/SHAKEN, helping to avoid having their traffic blocked.

TransNexus offers services for Telinta customers based both inside and outside the US.

Please contact info@telinta.com for an introduction to TransNexus.

Please contact your legal advisor for more information about how STIR/SHAKEN requirements will impact your business.
