### News Flash

#### Stripe Payment Processor.

Telinta engineers are tirelessly working on improving the TeliCore functionality and integrating new services that can help service providers increase their revenues. One of the most important parts of a billing platform is the ability to collect Credit Card payments from end users. A Credit Card payment processor greatly decreases administrative efforts for any type of service. TeliCore already has numerous payment gateways integrated and available out of the box. Recently we added a new popular payment processor — [Stripe](#).

Stripe processes billions of dollars per year for thousands of businesses, from newly-launched start-ups to Fortune 500 companies. Web and mobile businesses around the world that use Stripe include Rackspace, Shopify, Reddit, Foursquare, DailyMotion, Lyft, and many more. Stripe currently supports businesses in the US, Canada, UK, Australia, and many European countries.

Stripe allows instantly accepting payments from around the world. The integration is completely transparent — Stripe payment system is available under the 'Payments' main menu entry.

### Solutions

#### Geo-IP Fraud Protection

VoIP fraud protection is always one of the most important issues for any service provider. Worldwide, VoIP fraud has recently become an extremely serious problem: in 2013, the global loss due to such fraud was approximately \$46.3 Billion (according to Global Fraud Loss Survey by [CFCA](#)).

TeliCore has various protection mechanisms that help fight fraud. Recent platform upgrade brought one more powerful tool against fraud – Geo-IP profiles. This protection mechanism is based on analyzing the geographical location of the caller and checking it against the list of allowed, suspicious, and forbidden countries. For example, you have a customer company in New York city, USA. The employees of this company mainly make calls from the USA. With the help of Geo-IP fraud profiles, TeliCore will check the caller's location and if it is outside of the USA, the call will be considered suspicious and therefore forbidden or screened.

For the configuration instructions, please check the [Fraud protection guide](#) or contact us at [support@telinta.com](mailto:support@telinta.com).

## Best Practices

### US Inter/Intra State Billing

The recent TeliCore upgrade brought many new exciting features to the platform, including US Inter/Intra state billing. Some termination providers have different rates for Inter-state (between different states) and Intra-state (within one state) billing. TeliCore is capable of applying different rates depending on Caller-ID of the calling party. To enable Inter/Intra state billing, the service provider should enable the following option on the Tariffs page:

 **Enable US Intra-State**

To upload Inter/Intra state rates, the service provider should follow the steps below during the upload:

- ▶ Specify **\_USInterIntraState\_** in the Off-peak Period field.
- ▶ For interstate rates, specify the rate in the First Price and Next Price fields.
- ▶ For intrastate rates, specify the rate in the **Second Off-peak First Price** and **Second Off-peak Next Price** fields.

During the upload, the system will automatically recognize the destinations marked as Inter/Intra state and appropriate rates will be applied.

**Your opinion counts.**
